

Git Cheat Sheet		Rebasing Rebase feature branch onto main (to incorporate new changes made to main). Prevents unnecessary merge commits into feature, keeping history clean 		Review your Repo List new or modified files not yet committed <pre>\$ git status</pre> List commit history, with respective IDs <pre>\$ git log --oneline</pre> Show changes to unstaged files. For changes to staged files, add --cached option <pre>\$ git diff</pre> Show changes between two commits <pre>\$ git diff commit1_ID commit2_ID</pre>		Delete stash at index 1. Omit stash@{n} to delete last stash made <pre>\$ git stash drop stash@{1}</pre> Delete all stashes <pre>\$ git stash clear</pre>	
Setup Set the name and email that will be attached to your commits and tags <pre>\$ git config --global user.name "Danny Adams" \$ git config --global user.email "my-email@gmail.com"</pre>		Branches List all local branches. Add -r flag to show all remote branches. -a flag for all branches. <pre>\$ git branch</pre> Create a new branch <pre>\$ git branch <new-branch></pre> Switch to a branch & update the working directory <pre>\$ git checkout <branch></pre> Create a new branch and switch to it <pre>\$ git checkout -b <new-branch></pre> Delete a merged branch <pre>\$ git branch -d <branch></pre> Delete a branch, whether merged or not <pre>\$ git branch -D <branch></pre> Add a tag to current commit (often used for new version releases) <pre>\$ git tag <tag-name></pre>		Undoing Things Move (&/or rename) a file & stage move <pre>\$ git mv <existing_path> <new_path></pre> Remove a file from working directory & staging area, then stage the removal <pre>\$ git rm <file></pre> Remove from staging area only <pre>\$ git rm --cached <file></pre> View a previous commit (READ only) <pre>\$ git checkout <commit_ID></pre> Create a new commit, reverting the changes from a specified commit <pre>\$ git revert <commit_ID></pre> Go back to a previous commit & delete all commits ahead of it (revert is safer). Add --hard flag to also delete workspace changes (BE VERY CAREFUL) <pre>\$ git reset <commit_ID></pre>		Synchronizing Add a remote repo <pre>\$ git remote add <alias> <url></pre> View all remote connections. Add -v flag to view urls. <pre>\$ git remote</pre> Remove a connection <pre>\$ git remote remove <alias></pre> Rename a connection <pre>\$ git remote rename <old> <new></pre> Fetch all branches from remote repo (no merge) <pre>\$ git fetch <alias></pre> Fetch a specific branch <pre>\$ git fetch <alias> <branch></pre> Fetch the remote repo's copy of the current branch, then merge <pre>\$ git pull</pre> Move (rebase) your local changes onto the top of new changes made to the remote repo (for clean, linear history) <pre>\$ git pull --rebase <alias></pre> Upload local content to remote repo <pre>\$ git push <alias></pre> Upload to a branch (can then pull request) <pre>\$ git push <alias> <branch></pre>	
Start a Project Create a local repo (omit <directory> to initialise the current directory as a git repo) <pre>\$ git init <directory></pre> Download a remote repo <pre>\$ git clone <url></pre>		Merging Merge branch a into branch b. Add --no-ff option for no-fast-forward merge  New Merge Commit (no-ff) <pre>\$ git checkout b \$ git merge a</pre> Merge & squash all commits into one new commit <pre>\$ git merge --squash a</pre>		Stashing Store modified & staged changes. To include untracked files, add -u flag. For untracked & ignored files, add -a flag. <pre>\$ git stash</pre> As above, but add a comment. <pre>\$ git stash save "comment"</pre> Partial stash. Stash just a single file, a collection of files, or individual changes from within files <pre>\$ git stash -p</pre> List all stashes <pre>\$ git stash list</pre> Re-apply the stash without deleting it <pre>\$ git stash apply</pre> Re-apply the stash at index 2, then delete it from the stash list. Omit stash@{n} to pop the most recent stash. <pre>\$ git stash pop stash@{2}</pre> Show the diff summary of stash 1. Pass the -p flag to see the full diff. <pre>\$ git stash show stash@{1}</pre>			
Make a Change Add a file to staging <pre>\$ git add <file></pre> Stage all files <pre>\$ git add .</pre> Commit all staged files to git <pre>\$ git commit -m "commit message"</pre> Add all changes made to tracked files & commit <pre>\$ git commit -am "commit message"</pre>		Basic Concepts main: default development branch origin: default upstream repo HEAD: current branch HEAD^: parent of HEAD HEAD~4: great-great-grandparent of HEAD By @DoableDanny
